- Languages: C++, RPGIII, Cobol, Pascal, Assembly, Visual Basic
 - Graduate degree in Computer Science with a 3.75 GPA

EXPERIENCE

ABC Company

.Net Developer

October 2004-Present

- .Net application developer, utilizing SQL Server 2000, 2005, IBM DB2, Active Directory, FTP, Windows Server 2003, ASP.Net, VB, C#, .Net Framework 1.2, 2.0.
- I developed single and multi-threaded, high volume desktop, back-end and Website applications, providing solutions across multiple business areas within the company.

DEF Company - St. Louis Park, MN

Senior Software Developer

1995–April 2004

- I have been a .Net developer on an ASP.Net Client/Server application running on Windows Servers and Windows clients for two years. The host database is SQL Server 2000 storing over 9GB of data accessed by ADO.Net, utilizing C#, VB.Net, ASP.Net. Databases were accessed and replicated by clients I developed on over the Internet by a C# application using MSDE 2000 with a C# application with a DHTML front end to simulate a Web Browser experience.
- I developed ASP.Net code to create a Browser front end to access the Server data in Search and Reporting Modules.
- I have been a C++ developer for five years on a Personal Information Manager application for Real Estate Brokers and Agents, running on Windows. The application utilized a Codebase database, Crystal Reports, Mabry email control, ActiveX controls, MS DHTML control and Leadtools imaging controls.
- I have also developed and maintained for two years, distributed database systems and 32-bit Delphi Windows clients using OOAD, Turbo Pascal, Delphi, InterBase, Piparti that ran on Netware and Windows Servers.
- I developed Web services for three years, using XML, XSLT, SOAP and ASP.Net on a HP Alpha platform using C, C++ and PL1 code.
- Three years developing JavaScript code, JScript code and HTML Components for Search, Reporting, E-mail Publishing, Financial Calculators, property mapping and general application maintenance.
- For six years, I created InstallShield installations for desktop and Web applications.
- I have created CD installations for these applications using InstallShield Developer, DemoShield and Windows Installer, saving \$100,000 in distribution costs the first year.
- Developed Web based tools for installation setup of Web applications saving the company \$500,000 in

distribution costs the first year.

- Created and maintained software processes automating updates to third party applications, DLL files and Microsoft Web Browser security updates, ensuring 24*7*365 customer access to nationwide web applications and eliminating down system fines of \$75,000 per year.
- Developed source/build control management system saving \$50,000 per year in Quality Assurance charges to department.
- Created quarterly product rollout documentation, training and site-specific setup of HTML and database configurations nationwide.
