Visual Studios 2005/2008
.NET 1.1, 2.0, 3.5
Developer Express dxExperience
Business Intelligence
EDI (204,210,810,850)
Viso 2000/2007
Office Suite XP/2007
Microsoft Projects

TMW Systems
TMT Software
Pegasus Imaging
Great Plains 8.0
Altova XMLSpy
Crystal Reports
Cogonos Powerhoue 4GL
Cobol
TSO/ISPF, CICS, UNIX

PROFESSIONAL EXPERIENCE

ABC Company

May 1989 to Present

Project Manager, Lead Developer
St Paul, MN

I manage development projects and day-to-day operational aspects of projects and provide supervision

for developers. I assign development tasks taking into account skill level of team members. I provide mentoring to junior team members. I continually look for improvements to system processes and application functionality, as well as, review and enforce programming standards.

I employ collaboration and open communication with staff and internal customers. I do this by having weekly meetings with team members where projects can openly be discussed. Internal customers involved in current projects are encouraged to contact me with any questions and I will contact them with questions and progress reports.

I provide support to internal applications and databases. I develop databases and applications using Microsoft products including SQL Server 2005 and Visual Basic .NET.

I initiated a means for anyone to give Feed Back about an application, including comments, problems and suggestions. Feed Back also provides a means of capturing a screen image and linking it to the application for review by the helpdesk or developer. The person giving the Feed Back is notified via email when the Feed Back has been read and the response from the developer or helpdesk.

I recently finished the rewrite of the company's Operational Applications from a HP mainframe to a Server based environment. This was a major undertaking which took approximately 18 months. The project was completed on time with little problems on the go live date. This was more than a rewrite; it became a complete redesign of the applications which included Order Entry, Billing, Long Haul and Local Dispatch, Driver Services, Claims and Warehouse Billing. I was the project manager and did a large amount of the SQL and VB. Net development.

I developed a Business Intelligence application for senior management to view the company's revenue and expense margins by various parameters and a function to drill down into the detail. I developed the database and procedures that cleanse and translate the data and the .NET application to view the results.

Corporation has 18 different Terminals throughout the country. Each Terminal operates slightly different. This uniqueness must be taken into account when developing applications thus, the applications and databases must be flexible.

DEF Company

November 1981 to May 1989

Senior Programmer

Hopkins, MN

Provided support and development for the Production Management and Purchasing systems.

EDUCATION

ABC Technical Institute

Associate of Arts Information Systems

GPA: 3.5

DEF High School

Diploma GPA: 3.5

Received Honors for Independent Study in Data Processing
